

VW T5/T6 radio/accessory ignition supply cable.

Make sure that key is not in the ignition before you start work.

Remove radio. Part the bullet connectors in the red cable on the back of the radio. Insert the male bullet connector on the red wire from the radio into the female bullet connector on the new loom.

T5

Remove the near side lower dash panel and fuse box cover.

Route the red wire to the front of the fuse box. Remove the fuse from position 19 in the centre of the middle row and replace with twin fuse connector.

T6

Remove the glove box and fuse box cover.

Route the red wire to the front of the fuse box. Remove the 5 amp fuse from fourth position down on the right hand column and replace with twin fuse connector.

The switching on and off of the radio is now controlled by the ignition switch. The power will stay on until the key is removed.

Can also be used to supply other accessories requiring an ignition supply. Max 5 amps.

If you have any difficulty please phone Martyn on 07971 165747.
